EXAMINER'S AMENDMENT

Amdt/PHH

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

Figure 1 and 2 should be designated by a legend such as --Prior Art-- ✓
because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.121(d)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

The following changes to the drawings have been approved by the examiner and agreed upon by applicant: Figs. 1 and 2 should be labeled --PRIOR ART--. In order to avoid abandonment of the application, applicant must make these above agreed upon drawing changes.

REASONS FOR ALLOWANCE

2. The following is an examiner's statement of reasons for allowance: the claims are allowable over prior art of record, because none of the references in alone or in combination discloses:

A method of packaging optical parts for optical communication, comprising:

- the first step of mounting an optical filter onto a hollow cylindrical filter holder of which upper and lower faces are open and communicate with each other;
- the second step of placing first and second solder preforms on the upper and lower faces of the cylindrical filter holder, respectively;
- the third step of bring a single core collimator into contact with the first solder preform and a twin core collimator into contact with the second solder preform;
- the fourth step of optically aligning the single and twin core collimators with the optical filter; and
- the fifth step of heating and melting the first and second solder preforms and then bonding the single and twin core collimators to the cylindrical filter holder, as discloses in claims 1 and 10.

The method of packaging optical parts for optical communication following five steps (as underline steps) above is critically, since the optical

communication package is improved: an optical fiber has an minimum transmission loss; high productivity; reduce lost; minimize thermal deformation of areas except a soldering area; and achieving highly reliable packaging of the optical parts.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
